Child has symptoms of COVID-19 (fever, cough or SOB) AND:

- Diagnosis was confirmed by positive lab test OR
- Clinical diagnosis (suspected diagnosis) was made by HCP OR
- Parent or patient suspects COVID-19 based on symptoms consistent with COVID-19 AND widespread prevalence in their community. In areas with major community spread, lab test confirmation will mainly be indicated on patients who need hospitalization.

Note to Triager - Guideline Choice for Suspected COVID-19:

- During major community spread of COVID-19, patients with fever and/or cough can be presumed to have COVID-19. Use the COVID-19 guidelines for these patients, not Cough or Fever guidelines.
- The best COVID-19 guideline choice also depends on the public health department (PHD) recommendations and testing availability in the patient's community.
- If PHD does not recommend testing on all suspected COVID-19 patients and/or if testing is not readily available, use the Coronavirus (COVID-19) Diagnosed or Suspected guideline.
- If PHD recommends testing on all suspected COVID-19 patients and testing is readily available, use the Coronavirus (COVID-19) Exposure guideline.

INITIAL ASSESSMENT QUESTIONS

Note to Triager - Respiratory Distress: Always rule out respiratory distress (also known as working hard to breathe or shortness of breath). Listen for grunting, stridor, wheezing, tachypnea in these calls. How to assess: Listen to the child's breathing early in your assessment. Reason: What you hear is often more valid than the caller's answers to your triage questions.

1. COVID-19 DIAGNOSIS: "Who made your Coronavirus (COVID-19) diagnosis? Was it confirmed by a positive lab test? If not diagnosed by HCP, ask, "Are there lots of cases (community spread) where you live?" (See public health department website, if unsure)
   * MAJOR community spread: high number of cases; numbers of cases are increasing; many people hospitalized.
   * MINOR community spread: low number of cases; not increasing; few or no people hospitalized
2. ONSET: "When did the COVID-19 symptoms start?"
3. WORST SYMPTOM: "What is your child's worst symptom?"
4. COUGH: "How bad is the cough?"
5. RESPIRATORY DISTRESS: "Describe your child's breathing. What does it sound like?" (e.g., wheezing, stridor, grunting, weak cry, unable to speak, retractions, rapid rate, cyanosis)
6. BETTER-SAME-WORSE: "Is your child getting better, staying the same or getting worse compared to yesterday?" If getting worse, ask, "In what way?"
7. FEVER: "Does your child have a fever?" If so, ask: "What is it, how was it measured, and how long has it been present?"
8. CHILD'S APPEARANCE: "How sick is your child acting?" " What is he doing right now?" If asleep, ask: "How was he acting before he went to sleep?"
9. HIGHER RISK for COMPLICATIONS: "Does your child have any chronic medical problems?" (e.g., heart or lung disease, asthma, weak immune system, etc)
TRIAGE ASSESSMENT QUESTIONS

Call EMS 911 Now

Severe difficulty breathing (struggling for each breath, unable to speak or cry, making grunting noises with each breath, severe retractions) (Triage tip: Listen to the child's breathing.)

1 Call EMS 911 Now: Your child needs immediate medical attention. You need to hang up and call 911 (or an ambulance). (Triager Discretion: I'll call you back in a few minutes to be sure you were able to reach them.)

2 Tell the Ambulance Dispatcher about COVID-19 Diagnosis:
   • When you call 911, tell the dispatcher that your child probably has COVID-19.

3 Tell Ambulance Medics about COVID-19 Diagnosis:
   • Tell the paramedic right away that your child may have COVID-19.
   • Paramedics should call ahead to the ED to let them know.

4 Cover Your Mouth and Nose - Wear a Mask:
   • Cover the patient's mouth and nose with a disposable tissue (e.g., Kleenex or paper towel) or a washcloth.
   • Have patient wear a disposable face mask if you have one.
   • Ask for a mask on arrival.

5 Care Advice given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.

Slow, shallow, weak breathing

R/O: respiratory depression with impending apnea

1 Call EMS 911 Now: Your child needs immediate medical attention. You need to hang up and call 911 (or an ambulance). (Triager Discretion: I'll call you back in a few minutes to be sure you were able to reach them.)

2 Tell the Ambulance Dispatcher about COVID-19 Diagnosis:
   • When you call 911, tell the dispatcher that your child probably has COVID-19.

3 Tell Ambulance Medics about COVID-19 Diagnosis:
   • Tell the paramedic right away that your child may have COVID-19.
   • Paramedics should call ahead to the ED to let them know.

4 Cover Your Mouth and Nose - Wear a Mask:
   • Cover the patient's mouth and nose with a disposable tissue (e.g., Kleenex or paper towel) or a washcloth.
   • Have patient wear a disposable face mask if you have one.
   • Ask for a mask on arrival.

5 Care Advice given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.

[1] Bluish (or gray) lips or face now AND [2] persists when not coughing

R/O: cyanosis and need for oxygen

1 Call EMS 911 Now: Your child needs immediate medical attention. You need to hang up and call 911 (or an ambulance). (Triager Discretion: I'll call you back in a few minutes to be sure you were able to reach them.)

2 Tell the Ambulance Dispatcher about COVID-19 Diagnosis:
   • When you call 911, tell the dispatcher that your child probably has COVID-19.

3 Tell Ambulance Medics about COVID-19 Diagnosis:
   • Tell the paramedic right away that your child may have COVID-19.
   • Paramedics should call ahead to the ED to let them know.

4 Cover Your Mouth and Nose - Wear a Mask:
   • Cover the patient's mouth and nose with a disposable tissue (e.g., Kleenex or paper towel) or a washcloth.
   • Have patient wear a disposable face mask if you have one.
   • Ask for a mask on arrival.

5 Care Advice given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.
Difficult to awaken or not alert when awake

*R/O: encephalitis*

1. **Call EMS 911 Now:** Your child needs immediate medical attention. You need to hang up and call 911 (or an ambulance). (Triager Discretion: I’ll call you back in a few minutes to be sure you were able to reach them.)

2. **Tell the Ambulance Dispatcher about COVID-19 Diagnosis:**
   - When you call 911, tell the dispatcher that your child probably has COVID-19.

3. **Tell Ambulance Medics about COVID-19 Diagnosis:**
   - Tell the paramedic right away that your child may have COVID-19.
   - Paramedics should call ahead to the ED to let them know.

4. **Cover Your Mouth and Nose - Wear a Mask:**
   - Cover the patient's mouth and nose with a disposable tissue (e.g., Kleenex or paper towel) or a washcloth.
   - Have patient wear a disposable face mask if you have one.
   - Ask for a mask on arrival.

5. **Care Advice** given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.

Very weak (doesn’t move or make eye contact)

*R/O: sepsis or shock*

1. **Call EMS 911 Now:** Your child needs immediate medical attention. You need to hang up and call 911 (or an ambulance). (Triager Discretion: I’ll call you back in a few minutes to be sure you were able to reach them.)

2. **Tell the Ambulance Dispatcher about COVID-19 Diagnosis:**
   - When you call 911, tell the dispatcher that your child probably has COVID-19.

3. **Tell Ambulance Medics about COVID-19 Diagnosis:**
   - Tell the paramedic right away that your child may have COVID-19.
   - Paramedics should call ahead to the ED to let them know.

4. **Cover Your Mouth and Nose - Wear a Mask:**
   - Cover the patient's mouth and nose with a disposable tissue (e.g., Kleenex or paper towel) or a washcloth.
   - Have patient wear a disposable face mask if you have one.
   - Ask for a mask on arrival.

5. **Care Advice** given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.

Sounds like a life-threatening emergency to the triager

1. **Call EMS 911 Now:** Your child needs immediate medical attention. You need to hang up and call 911 (or an ambulance). (Triager Discretion: I’ll call you back in a few minutes to be sure you were able to reach them.)

2. **Tell the Ambulance Dispatcher about COVID-19 Diagnosis:**
   - When you call 911, tell the dispatcher that your child probably has COVID-19.

3. **Tell Ambulance Medics about COVID-19 Diagnosis:**
   - Tell the paramedic right away that your child may have COVID-19.
   - Paramedics should call ahead to the ED to let them know.

4. **Cover Your Mouth and Nose - Wear a Mask:**
   - Cover the patient's mouth and nose with a disposable tissue (e.g., Kleenex or paper towel) or a washcloth.
   - Have patient wear a disposable face mask if you have one.
   - Ask for a mask on arrival.

5. **Care Advice** given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.

See More Appropriate Guideline

Go to Guideline: Coronavirus (COVID-19) - Exposure (Pediatric)
Go to ED Now

1 Difficulty breathing confirmed by triager BUT [2] not severe  (Triage tip: Listen to the child's breathing.)

R/O: pneumonia

0 Go To ED Now: Your child needs to be seen in the Emergency Department immediately. Go to the ED at __________ Hospital. Leave now. Drive carefully.

1 Alternative Disposition - Re-Triage All Patients Before Going to the ED (if available):
- During this pandemic, the medical community is trying to prevent any unnecessary referrals to the ED. Parents want this as well. Reason: Many are very fearful of being exposed to COVID-19 in the ED or other medical settings.
- Therefore, some EDs encourage re-triage of nurse referrals to their ED. Re-triage by a physician has been shown to reduce ED referrals.
- In many communities, the re-triage will be provided by the PCP (primary care provider).
- In some communities, the ED may provide a telephone triage service for patients who have COVID-19 with worsening symptoms.
- Some hospitals or practices may even offer a telemedicine triage service.

2 Note to Triager - Triage Nurse Should Notify Emergency Department (ED):
- Tell them you are sending a patient with suspected diagnosis of COVID-19 who is getting worse and inform them of patient's symptoms.
- Obtain and document the patient / caller's mobile phone number. Either keep the patient on hold or call the patient back with instructions.
- Reason: So ED can make plans to prevent COVID-19 spread to others in the hospital.
- Also determine the best means of transportation.

3 You Need to Go to the Emergency Department (ED):
- You will need to go to a nearby ED.
- Do not leave until I've called and talked with the ED. The ED may have special instructions on how best to get you there. I will call you back (or place you on hold).
- The ED is the most prepared to prevent the spread of this infection to others.

4 Cover Your Mouth and Nose - Wear a Mask:
- Cover the patient's mouth and nose with a disposable tissue (e.g., Kleenex or paper towel) or a washcloth.
- Have patient wear a disposable face mask if you have one.
- Ask for a mask on arrival.

5 Announce COVID-19 Diagnosis on Arrival in ED:
- Tell the first hospital worker you meet that your child probably has (or does have) COVID-19.
- Tell them you were referred because of trouble breathing or other serious symptoms.

6 Care Advice given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.

Ribs are pulling in with each breath (retractions)

R/O: pneumonia

0 Go To ED Now: Your child needs to be seen in the Emergency Department immediately. Go to the ED at __________ Hospital. Leave now. Drive carefully.

1 Alternative Disposition - Re-Triage All Patients Before Going to the ED (if available):
- During this pandemic, the medical community is trying to prevent any unnecessary referrals to the ED. Parents want this as well. Reason: Many are very fearful of being exposed to COVID-19 in the ED or other medical settings.
- Therefore, some EDs encourage re-triage of nurse referrals to their ED. Re-triage by a physician has been shown to reduce ED referrals.

- Ask for a mask on arrival.

Announce COVID-19 Diagnosis on Arrival in ED:
- Tell the first hospital worker you meet that your child probably has (or does have) COVID -19.
- Tell them you were referred because of trouble breathing or other serious symptoms.

Fever Under 3 Months Old - Don't Give Fever Medicine:
- Don't give any acetaminophen before being seen.
- Need accurate documentation of temperature in medical setting to decide if fever is really present. (Reason: may require septic work-up.)
7 Care Advice given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.

SEVERE chest pain (excruciating)

R/O: pneumonia, pleurisy

0 Go To ED Now: Your child needs to be seen in the Emergency Department immediately. Go to the ED at _____________ Hospital. Leave now. Drive carefully.

1 Alternative Disposition - Re-Triage All Patients Before Going to the ED (if available):
- During this pandemic, the medical community is trying to prevent any unnecessary referrals to the ED. Parents want this as well. Reason: Many are very fearful of being exposed to COVID-19 in the ED or other medical settings.

4 Cover Your Mouth and Nose - Wear a Mask:
- Cover the patient's mouth and nose with a disposable tissue (e.g., Kleenex or paper towel) or a washcloth.
- Have patient wear a disposable face mask if you have one.
- Ask for a mask on arrival.

5 Announce COVID-19 Diagnosis on Arrival in ED:
- Tell the first hospital worker you meet that your child probably has (or does have) COVID-19.
- Tell them you were referred because of trouble breathing or other serious symptoms.

6 Pain Medicine:
- For pain relief, give acetaminophen every 4 hours or ibuprofen every 6 hours as needed. (See Dosage table.)
- Note to triager about ibuprofen concerns: Discuss only if caller brings up concerns about ibuprofen. Response: The CDC, WHO and other experts continue to support the use of ibuprofen (if needed) for patients with COVID-19. They found no scientific evidence to support the claim that ibuprofen made this disease worse.

7 Care Advice given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.

Go to ED Now (or PCP triage)

Child sounds very sick or weak to the triager

Reason: severe acute illness or serious complication suspected

0 Go To ED Now (or PCP Triage):
- If No PCP (Primary Care Provider) Second-Level Triage: Your child needs to be seen within the next hour. Go to the ED/UCC at _____________ Hospital. Leave as soon as you can.
- If PCP Second-Level Triage Required: Your child may need to be seen. Your doctor (or NP/PA) will want to talk with you to decide what's best. I'll page the on-call provider now. If you haven't heard from the provider (or me) within 30 minutes, go directly to the ED/UCC at _____________ Hospital.
1 Alternative Disposition - Re-Triage All Patients Before Going to the ED (if available):
- During this pandemic, the medical community is trying to prevent any unnecessary referrals to the ED. Parents want this as well. Reason: Many are very fearful of being exposed to COVID-19 in the ED or other medical settings.
- Therefore, some EDs encourage re-triage of nurse referrals to their ED. Re-triage by a physician has been shown to reduce ED referrals.
- In some communities, the re-triage will be provided by the PCP (primary care provider).
- In some communities, the ED may provide a telephone triage service for patients who have COVID-19 with worsening symptoms.
- Some hospitals or practices may even offer a telemedicine triage service.

2 Note to Triager - Triage Nurse Should Notify Emergency Department (ED):
- Tell them you are sending a patient with suspected diagnosis of COVID-19 who is getting worse and inform them of patient's symptoms.
- Obtain and document the patient / caller's mobile phone number. Either keep the patient on hold or call the patient back with instructions.
- Reason: So ED can make plans to prevent COVID-19 spread to others in the hospital.
- Also determine the best means of transportation.

3 You Need to Go to the Emergency Department (ED):
- You will need to go to a nearby ED.
- Do not leave until I've called and talked with the ED. The ED may have special instructions on how best to get you there. I will call you back (or place you on hold).
- The ED is the most prepared to prevent the spread of this infection to others.

4 Cover Your Mouth and Nose - Wear a Mask:
- Cover the patient's mouth and nose with a disposable tissue (e.g., Kleenex or paper towel) or a washcloth.
- Have patient wear a disposable face mask if you have one.
- Ask for a mask on arrival.

5 Announce COVID-19 Diagnosis on Arrival in ED:
- Tell the first hospital worker you meet that your child probably has (or does have) COVID-19.
- Tell them you were referred because of trouble breathing or other serious symptoms.

6 Care Advice given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.

Call PCP Now

Wheezing confirmed by triager

0 Call PCP Now: You need to discuss this with your child's doctor (or NP/PA). I'll page the on-call provider now. If you haven't heard from the provider (or me) within 30 minutes, call again.

1 Alternative Disposition - If NO PCP, Have Other HCP Re-triage the Patient, If Available:
- During this pandemic, the medical community is trying to prevent any unnecessary referrals to medical facilities. Parents want this as well. Reason: Many are very fearful of being exposed to COVID-19 in medical settings.
- Therefore, many EDs and UCCs encourage re-triage of nurse referrals to their site. Re-triage by a physician has been shown to reduce ED referrals.
- Your patient does not have a PCP (primary care provider) or HCP: If available, use another resource.
- In some communities, the ED may provide a telephone triage service for patients who have COVID-19 with worsening symptoms. Or an identified health department official may serve this role.
- Some hospitals or practices may even offer a telemedicine triage service.

2 Coughing Fits or Spells - Warm Mist and Fluids:
- Breathe warm mist (such as with shower running in a closed bathroom).
- Give warm clear fluids to drink. Examples are apple juice and lemonade. Don't use warm fluids before 3 months of age.
- Amount. If 3 - 12 months of age, give 1 ounce (30 ml) each time. Limit to 4 times per day. If over 1 year of age, give as much as needed.
- Reason: Both relax the airway and loosen up any phlegm.
- What to Expect: The coughing fit should stop. But, your child will still have a cough.
3 Fever Treatment:
- For fever above 102 F (39 C), you may use acetaminophen or ibuprofen if the patient is uncomfortable. (See Dosage table).
- For fevers 100-102 F (37.8 to 39 C), fever medicines are not needed. Reason: Fever turns on your body's immune system. Fever helps fight the infection.
- Exception: if the patient also has pain, treat it.
- Fluids: Offer cool fluids in unlimited amounts. Reason: prevent dehydration. Staying well hydrated helps the body sweat and give off heat.
- Note to triager about ibuprofen concerns: Discuss only if caller brings up concerns about ibuprofen. Response: The CDC, WHO, AAP and other experts continue to support the use of ibuprofen (if needed) for patients with COVID-19. They found no scientific evidence to support the claim that ibuprofen made this disease worse.

4 Home Isolation Is Needed:
- Isolation means separating sick people with a contagious disease from people who are not sick. (CDC) That means stay at home.
- Isolate the sick patient. Reason: They are contagious and can spread their infection to others.
- Other family members should also stay at home on quarantine. Living with a suspected COVID-19 patient implies close contact has occurred.
- Do Not allow any visitors. (such as friends)
- Do Not go to school or work.
- Do Not go to stores, restaurants, places of worship or other public places.
- Avoid public transportation or ride sharing.
- The patient needs to stay at home but does not need to be confined to a single room. Preventing spread of respiratory infections within a home is nearly impossible. The sick person should try to avoid very close contact with other family members. That includes hugging, kissing, sitting next to or sleeping in the same bed.
- None of this is realistic for young children.
- In addition, many families have limited options. Therefore, triagers should individualize their recommendations for isolation after discussing it with the caller.

5 Call Back If:
- Shortness of breath occurs
- Difficulty breathing occurs
- Your child becomes worse

6 Care Advice given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.

Rapid breathing (Breaths/min > 60 if < 2 mo; > 50 if 2-12 mo; > 40 if 1-5 years; > 30 if 6-11 years; > 20 if > 12 years)

R/O: respiratory distress. (Caution: Do not attribute abnormal RR to fever)

0 Call PCP Now: You need to discuss this with your child's doctor (or NP/PA). I'll page the on-call provider now. If you haven't heard from the provider (or me) within 30 minutes, call again.

1 Alternative Disposition - If NO PCP, Have Other HCP Re-triage the Patient, If Available:
- During this pandemic, the medical community is trying to prevent any unnecessary referrals to medical facilities. Parents want this as well. Reason: Many are very fearful of being exposed to COVID-19 in medical settings.

   - Amount. If 3 - 12 months of age, give 1 ounce (30 ml) each time. Limit to 4 times per day. If over 1 year of age, give as much as needed.
   - Reason: Both relax the airway and loosen up any phlegm.
   - What to Expect: The coughing fit should stop. But, your child will still have a cough.
3 Fever Treatment:
- For fever above 102°F (39°C), you may use acetaminophen or ibuprofen if the patient is uncomfortable. (See Dosage table).
- For fevers 100-102°F (37.8 to 39°C), fever medicines are not needed. Reason: Fever turns on your body's immune system. Fever helps fight the infection.
- Exception: If the patient also has pain, treat it.
- Fluids: Offer cool fluids in unlimited amounts. Reason: prevent dehydration. Staying well hydrated helps the body sweat and give off heat.
- Note to triager about ibuprofen concerns: Discuss only if caller brings up concerns about ibuprofen. Response: The CDC, WHO, AAP and other experts continue to support the use of ibuprofen (if needed) for patients with COVID-19. They found no scientific evidence to support the claim that ibuprofen made this disease worse.

4 Pain Medicine:
- For pain relief, give acetaminophen every 4 hours or ibuprofen every 6 hours as needed. (See Dosage table.)
- Note to triager about ibuprofen concerns: Discuss only if caller brings up concerns about ibuprofen. Response: The CDC, WHO and other experts continue to support the use of ibuprofen (if needed) for patients with COVID-19. They found no scientific evidence to support the claim that ibuprofen made this disease worse.

5 Home Isolation Is Needed:
- Isolation means separating sick people with a contagious disease from people who are not sick. (CDC) That means stay at home.
- Isolate the sick patient. Reason: They are contagious and can spread their infection to others.
- Other family members should also stay at home on quarantine. Living with a suspected COVID-19 patient implies close contact has occurred.
- Do Not allow any visitors. (such as friends)
- Do Not go to school or work.
- Do Not go to stores, restaurants, places of worship or other public places.
- Avoid public transportation or ride sharing.
- The patient needs to stay at home but does not need to be confined to a single room. Preventing spread of respiratory infections within a home is nearly impossible. The sick person should try to avoid very close contact with other family members. That includes hugging, kissing, sitting next to or sleeping in the same bed.
- None of this is realistic for young children.
- In addition, many families have limited options. Therefore, triagers should individualize their recommendations for isolation after discussing it with the caller.

6 Call Back If:
- Shortness of breath occurs
- Difficulty breathing occurs
- Your child becomes worse

7 Care Advice given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.

[1] Lips or face have turned bluish BUT [2] only during coughing fits
R/O: need for oxygen

0 Call PCP Now: You need to discuss this with your child's doctor (or NP/PA). I'll page the on-call provider now. If you haven't heard from the provider (or me) within 30 minutes, call again.

1 Alternative Disposition - If NO PCP, Have Other HCP Re-triage the Patient, If Available:
- During this pandemic, the medical community is trying to prevent any unnecessary referrals to medical facilities. Parents want this as well. Reason: Many are very fearful of being exposed to COVID-19 in medical settings.
- Therefore, many EDs and UCCs encourage re-triage of nurse referrals to their site. Re-triage by a physician has been shown to reduce ED referrals.
- Your patient does not have a PCP (primary care provider) or HCP: If available, use another resource.
- In some communities, the ED may provide a telephone triage service for patients who have COVID-19 with worsening symptoms. Or an identified health department official may serve this role.
- Some hospitals or practices may even offer a telemedicine triage service.

2 Coughing Fits or Spells - Warm Mist and Fluids:
- Breathe warm mist (such as with shower running in a closed bathroom).
- Give warm clear fluids to drink. Examples are apple juice and lemonade. Don't use warm fluids before 3 months of age.
- Amount: If 3 - 12 months of age, give 1 ounce (30 ml) each time. Limit to 4 times per day. If over 1 year of age, give as much as needed.
- Reason: Both relax the airway and loosen up any phlegm.
- What to Expect: The coughing fit should stop. But, your child will still have a cough.
3  Fever Treatment:
- For fever above 102 F (39 C), you may use acetaminophen or ibuprofen if the patient is uncomfortable. (See Dosage table).
- For fevers 100-102 F (37.8 to 39 C), fever medicines are not needed. Reason: Fever turns on your body's immune system. Fever helps fight the infection.
- Exception: if the patient also has pain, treat it.
- Fluids: Offer cool fluids in unlimited amounts. Reason: prevent dehydration. Staying well hydrated helps the body sweat and give off heat.
- Note to triager about ibuprofen concerns: Discuss only if caller brings up concerns about ibuprofen. Response: The CDC, WHO, AAP and other experts continue to support the use of ibuprofen (if needed) for patients with COVID-19. They found no scientific evidence to support the claim that ibuprofen made this disease worse.

4  Home Isolation Is Needed:
- Isolation means separating sick people with a contagious disease from people who are not sick. (CDC) That means stay at home.
- Isolate the sick patient. Reason: They are contagious and can spread their infection to others.
- Other family members should also stay at home on quarantine. Living with a suspected COVID-19 patient implies close contact has occurred.
- Do Not allow any visitors. (such as friends)
- Do Not go to school or work.
- Do Not go to stores, restaurants, places of worship or other public places.
- Avoid public transportation or ride sharing.
- The patient needs to stay at home but does not need to be confined to a single room. Preventing spread of respiratory infections within a home is nearly impossible. The sick person should try to avoid very close contact with other family members. That includes hugging, kissing, sitting next to or sleeping in the same bed.
- None of this is realistic for young children.
- In addition, many families have limited options. Therefore, triagers should individualize their recommendations for isolation after discussing it with the caller.

5  Call Back If:
- Shortness of breath occurs
- Difficulty breathing occurs
- Your child becomes worse

6  Care Advice given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.

[1] Fever AND [2] > 105 F (40.6 C) by any route OR axillary > 104 F (40 C)

R/O: serious bacterial infection

0  Call PCP Now: You need to discuss this with your child's doctor (or NP/PA). I'll page the on-call provider now. If you haven't heard from the provider (or me) within 30 minutes, call again.

1  Alternative Disposition - If NO PCP, Have Other HCP Re-triage the Patient, If Available:
- During this pandemic, the medical community is trying to prevent any unnecessary referrals to medical facilities. Parents want this as well. Reason: Many are very fearful of being exposed to COVID-19 in medical settings.

- Your patient does not have a PCP (primary care provider) or HCP: If available, use another resource.
- In some communities, the ED may provide a telephone triage service for patients who have COVID-19 with worsening symptoms. Or an identified health department official may serve this role.
- Some hospitals or practices may even offer a telemedicine triage service.

2 Fever Treatment:
- For fever above 102 F (39 C), you may use acetaminophen or ibuprofen if the patient is uncomfortable. (See Dosage table).
- For fevers 100-102 F (37.8 to 39 C), fever medicines are not needed. Reason: Fever turns on your body's immune system. Fever helps fight the infection.
- Exception: if the patient also has pain, treat it.
- Fluids: Offer cool fluids in unlimited amounts. Reason: prevent dehydration. Staying well hydrated helps the body sweat and give off heat.
- Note to triager about ibuprofen concerns: Discuss only if caller brings up concerns about ibuprofen. Response: The CDC, WHO, AAP and other experts continue to support the use of ibuprofen (if needed) for patients with COVID-19. They found no scientific evidence to support the claim that ibuprofen made this disease worse.

3 Home Isolation Is Needed:
- Isolation means separating sick people with a contagious disease from people who are not sick. (CDC) That means stay at home.
- Isolate the sick patient. Reason: They are contagious and can spread their infection to others.
- Other family members should also stay at home on quarantine. Living with a suspected COVID-19 patient implies close contact has occurred.
- Do Not allow any visitors. (such as friends)
- Do Not go to school or work.
- Do Not go to stores, restaurants, places of worship or other public places.
- Avoid public transportation or ride sharing.
- The patient needs to stay at home but does not need to be confined to a single room. Preventing spread of respiratory infections within a home is nearly impossible. The sick person should try to avoid very close contact with other family members. That includes hugging, kissing, sitting next to or sleeping in the same bed.
- None of this is realistic for young children.
- In addition, many families have limited options. Therefore, triagers should individualize their recommendations for isolation after discussing it with the caller.

4 Call Back If:
- Shortness of breath occurs
- Difficulty breathing occurs
- Your child becomes worse

5 Care Advice given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.

Call PCP within 24 Hours

[1] Continuous coughing keeps from playing or sleeping AND [2] no improvement using cough treatment per guideline

0 Call PCP Within 24 Hours: You need to discuss this with your child's doctor (or NP/PA) within the next 24 hours.
- If Office Will Be Open: Call the office when it opens tomorrow morning.
- If Office Will Be Closed: I'll page the on-call provider now. Exception: From 9 pm to 9 am. Since this isn't urgent, we'll hold the page until morning.
1 Alternative Disposition - If NO PCP, Have Other HCP Re- triage the Patient, If Available:
- During this pandemic, the medical community is trying to prevent any unnecessary referrals to medical facilities. Parents want this as well. Reason: Many are very fearful of being exposed to COVID-19 in medical settings.
- Therefore, many EDs and UCCs encourage re-triage of nurse referrals to their site. Re-triage by a physician has been shown to reduce ED referrals.
- Your patient does not have a PCP (primary care provider) or HCP: If available, use another resource.
- In some communities, the ED may provide a telephone triage service for patients who have COVID-19 with worsening symptoms. Or an identified health department official may serve this role.
- Some hospitals or practices may even offer a telemedicine triage service.

2 Coughing Fits or Spells - Warm Mist and Fluids:
- Breathe warm mist (such as with shower running in a closed bathroom).
- Give warm clear fluids to drink. Examples are apple juice and lemonade. Don't use warm fluids before 3 months of age.
- Amount. If 3 - 12 months of age, give 1 ounce (30 ml) each time. Limit to 4 times per day. If over 1 year of age, give as much as needed.
- Reason: Both relax the airway and loosen up any phlegm.
- What to Expect: The coughing fit should stop. But, your child will still have a cough.

3 Homemade Cough Medicine:
- **Age**: 3 Months to 1 year:
  - Give warm clear fluids (e.g., apple juice or lemonade) to thin the mucus and relax the airway. Dosage: 1-3 teaspoons (5-15 ml) four times per day.
- **Note to Triager**: Option to be discussed only if caller complains that nothing else helps: Give a small amount of corn syrup. Dosage: 1/4 teaspoon (1 ml). Can give up to 4 times a day when coughing. Caution: Avoid honey until 1 year old (Reason: risk for botulism).
- **Age**: 1 year and older: Use **Honey** 1/2 to 1 tsp (2 to 5 ml) as needed as a homemade cough medicine. It can thin the secretions and loosen the cough. (If not available, can use corn syrup.) OTC cough syrups containing honey are also available. They are not more effective than plain honey and cost much more per dose.
- **Age**: 6 years and older: Use **Cough Drops** (throat drops) to decrease the tickle in the throat. If not available, can use hard candy. Avoid cough drops before 6 years. Reason: risk of choking.
- OTC cough medicines are not recommended. (Reason: no proven benefit for children.) Honey has been shown to work better.
- Don't use OTC cough medicines under 6 years of age. Reason: Cough is a protective reflex.

4 Humidifier:
- If the air is dry, use a humidifier in the bedroom (Reason: dry air makes coughs worse).
- Avoid menthol vapors (Reason: makes coughs worse).

5 Home Isolation Is Needed:
- Isolation means separating sick people with a contagious disease from people who are not sick. (CDC) That means stay at home.
- Isolate the sick patient. Reason: They are contagious and can spread their infection to others.
- Other family members should also stay at home on quarantine. Living with a suspected COVID-19 patient implies close contact has occurred.
- Do Not allow any visitors. (such as friends)
- Do Not go to school or work.
- Do Not go to stores, restaurants, places of worship or other public places.
- Avoid public transportation or ride sharing.
- The patient needs to stay at home but does not need to be confined to a single room. Preventing spread of respiratory infections within a home is nearly impossible. The sick person should try to avoid very close contact with other family members. That includes hugging, kissing, sitting next to or sleeping in the same bed.
- None of this is realistic for young children.
- In addition, many families have limited options. Therefore, triagers should individualize their recommendations for isolation after discussing it with the caller.

6 How to Protect Others - When You or Your Child are Sick:
- Stay home from school or work if you are sick. Your doctor or local health department will tell you when it is safe to return.
- Cough and sneeze into your shirt sleeve or inner elbow. Don't cough into your hand or the air.
- If available, sneeze into a tissue and throw it into trash can.
- Wash hands often with soap and water. After coughing or sneezing are important times.
- Don't share glasses, plates or eating utensils.
- Wear a face mask when around others.
- Always wear a face mask (if available) if you have to leave your home (such as going to a medical facility). Always call first to get approval and careful directions.
7 Fever Treatment:

- For fever above 102 F (39 C), you may use acetaminophen or ibuprofen if the patient is uncomfortable. (See Dosage table).
- For fevers 100-102 F (37.8 to 39 C), fever medicines are not needed. Reason: Fever turns on your body's immune system. Fever helps fight the infection.
- Exception: if the patient also has pain, treat it.
- Fluids: Offer cool fluids in unlimited amounts. Reason: prevent dehydration. Staying well hydrated helps the body sweat and give off heat.
- Note to triager about ibuprofen concerns: Discuss only if caller brings up concerns about ibuprofen. Response: The CDC, WHO, AAP and other experts continue to support the use of ibuprofen (if needed) for patients with COVID-19. They found no scientific evidence to support the claim that ibuprofen made this disease worse.

8 Call Back If:

- Shortness of breath occurs
- Difficulty breathing occurs
- Your child becomes worse

9 Care Advice given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.

R/O: otitis media or sinusitis

0 Call PCP Within 24 Hours: You need to discuss this with your child's doctor (or NP/PA) within the next 24 hours.

- If Office Will Be Open: Call the office when it opens tomorrow morning.
- If Office Will Be Closed: I'll page the on-call provider now. Exception: From 9 pm to 9 am. Since this isn't urgent, we'll hold the page until morning.

1 Alternative Disposition - If NO PCP, Have Other HCP Re-triage the Patient, If Available:

- During this pandemic, the medical community is trying to prevent any unnecessary referrals to medical facilities. Parents want this as well. Reason: Many are very fearful of being exposed to COVID-19 in medical settings.
- Therefore, many EDs and UCCs encourage re-triage of nurse referrals to their site. Re-triage by a physician has been shown to reduce ED referrals.
- Your patient does not have a PCP (primary care provider) or HCP: If available, use another resource.
- In some communities, the ED may provide a telephone triage service for patients who have COVID-19 with worsening symptoms. Or an identified health department official may serve this role.
- Some hospitals or practices may even offer a telemedicine triage service.

2 Fever Treatment:

- For fever above 102 F (39 C), you may use acetaminophen or ibuprofen if the patient is uncomfortable. (See Dosage table).
- For fevers 100-102 F (37.8 to 39 C), fever medicines are not needed. Reason: Fever turns on your body's immune system. Fever helps fight the infection.
- Exception: if the patient also has pain, treat it.
- Fluids: Offer cool fluids in unlimited amounts. Reason: prevent dehydration. Staying well hydrated helps the body sweat and give off heat.
- Note to triager about ibuprofen concerns: Discuss only if caller brings up concerns about ibuprofen. Response: The CDC, WHO, AAP and other experts continue to support the use of ibuprofen (if needed) for patients with COVID-19. They found no scientific evidence to support the claim that ibuprofen made this disease worse.

3 Coughing Fits or Spells - Warm Mist and Fluids:

- Breathe warm mist (such as with shower running in a closed bathroom).
- Give warm clear fluids to drink. Examples are apple juice and lemonade. Don't use warm fluids before 3 months of age.
- Amount. If 3 - 12 months of age, give 1 ounce (30 ml) each time. Limit to 4 times per day. If over 1 year of age, give as much as needed.
- Reason: Both relax the airway and loosen up any phlegm.
- What to Expect: The coughing fit should stop. But, your child will still have a cough.
Homemade Cough Medicine:
- **Age: 3 Months to 1 year:** Give warm clear fluids (e.g., apple juice or lemonade) to thin the mucus and relax the airway. Dosage: 1-3 teaspoons (5-15 ml) four times per day.
- **Age: 1 year and older:** Use Honey 1/2 to 1 tsp (2 to 5 ml) as needed as a homemade cough medicine. It can thin the secretions and loosen the cough. (If not available, can use corn syrup.) OTC cough syrups containing honey are also available. They are not more effective than plain honey and cost much more per dose.
- **Age: 6 years and older:** Use Cough Drops (throat drops) to decrease the tickle in the throat. If not available, can use hard candy. Avoid cough drops before 6 years. Reason: risk of choking.
- **OTC cough medicines are not recommended. (Reason: no proven benefit for children.) Honey has been shown to work better.
- Don't use OTC cough medicines under 6 years of age. Reason: Cough is a protective reflex.

Humidifier:
- If the air is dry, use a humidifier in the bedroom (Reason: dry air makes coughs worse).
- Avoid menthol vapors (Reason: makes coughs worse).

Home Isolation Is Needed:
- Isolation means separating sick people with a contagious disease from people who are not sick. (CDC) That means stay at home.
- Isolate the sick patient. Reason: They are contagious and can spread their infection to others.
- Other family members should also stay at home on quarantine. Living with a suspected COVID-19 patient implies close contact has occurred.
- Do Not allow any visitors. (such as friends)
- Do Not go to school or work.
- Do Not go to stores, restaurants, places of worship or other public places.
- Avoid public transportation or ride sharing.
- The patient needs to stay at home but does not need to be confined to a single room. Preventing spread of respiratory infections within a home is nearly impossible. The sick person should try to avoid very close contact with other family members. That includes hugging, kissing, sitting next to or sleeping in the same bed.
- None of this is realistic for young children.
- In addition, many families have limited options. Therefore, triagers should individualize their recommendations for isolation after discussing it with the caller.

How to Protect Others - When You or Your Child are Sick:
- Stay home from school or work if you are sick. Your doctor or local health department will tell you when it is safe to return.
- Cough and sneeze into your shirt sleeve or inner elbow. Don't cough into your hand or the air.
- If available, sneeze into a tissue and throw it into trash can.
- Wash hands often with soap and water. After coughing or sneezing are important times.
- Don't share glasses, plates or eating utensils.
- Wear a face mask when around others.
- Always wear a face mask (if available) if you have to leave your home (such as going to a medical facility). Always call first to get approval and careful directions.

Call Back If:
- Shortness of breath occurs
- Difficulty breathing occurs
- Your child becomes worse

Fever present > 3 days (72 hours)

R/O: bacterial superinfection - usually otitis media

Call PCP Within 24 Hours: You need to discuss this with your child's doctor (or NP/PA) within the next 24 hours.
- If Office Will Be Open: Call the office when it opens tomorrow morning.
- If Office Will Be Closed: I'll page the on-call provider now. Exception: From 9 pm to 9 am. Since this isn't urgent, we'll hold the page until morning.
1 Alternative Disposition - If NO PCP, Have Other HCP Re-triage the Patient, If Available:

- During this pandemic, the medical community is trying to prevent any unnecessary referrals to medical facilities. Parents want this as well. Reason: Many are very fearful of being exposed to COVID-19 in medical settings.
- Therefore, many EDs and UCCs encourage re-tribe of nurse referrals to their site. Re-tribe by a physician has been shown to reduce ED referrals.
- Your patient does not have a PCP (primary care provider) or HCP: If available, use another resource.
- In some communities, the ED may provide a telephone triage service for patients who have COVID-19 with worsening symptoms. Or an identified health department official may serve this role.
- Some hospitals or practices may even offer a telemedicine triage service.

2 Fever Treatment:

- For fever above 102 F (39 C), you may use acetaminophen or ibuprofen if the patient is uncomfortable. (See Dosage table).
- For fevers 100-102 F (37.8 to 39 C), fever medicines are not needed. Reason: Fever turns on your body’s immune system. Fever helps fight the infection.
- Exception: if the patient also has pain, treat it.
- Fluids: Offer cool fluids in unlimited amounts. Reason: prevent dehydration. Staying well hydrated helps the body sweat and give off heat.
- Note to triager about ibuprofen concerns: Discuss only if caller brings up concerns about ibuprofen. Response: The CDC, WHO, AAP and other experts continue to support the use of ibuprofen (if needed) for patients with COVID-19. They found no scientific evidence to support the claim that ibuprofen made this disease worse.

3 Coughing Fits or Spells - Warm Mist and Fluids:

- Breathe warm mist (such as with shower running in a closed bathroom).
- Give warm clear fluids to drink. Examples are apple juice and lemonade. Don’t use warm fluids before 3 months of age.
- Amount: If 3 - 12 months of age, give 1 ounce (30 ml) each time. Limit to 4 times per day. If over 1 year of age, give as much as needed.
- Reason: Both relax the airway and loosen up any phlegm.
- What to Expect: The coughing fit should stop. But, your child will still have a cough.

4 Homemade Cough Medicine:

- Age: 3 Months to 1 year:
  - Give warm clear fluids (e.g., apple juice or lemonade) to thin the mucus and relax the airway. Dosage: 1-3 teaspoons (5-15 ml) four times per day.
  - Note to Triage: Option to be discussed only if caller complains that nothing else helps: Give a small amount of corn syrup. Dosage: 1/4 teaspoon (1 ml). Can give up to 4 times a day when coughing. Caution: Avoid honey until 1 year old (Reason: risk for botulism).
- Age 1 year and older: Use Honey 1/2 to 1 tsp (2 to 5 ml) as needed as a homemade cough medicine. It can thin the secretions and loosen the cough. (If not available, can use corn syrup.) OTC cough syrups containing honey are also available. They are not more effective than plain honey and cost much more per dose.
- Age 6 years and older: Use Cough Drops (throat drops) to decrease the tickle in the throat. If not available, can use hard candy. Avoid cough drops before 6 years. Reason: risk of choking.
- OTC cough medicines are not recommended. (Reason: no proven benefit for children.) Honey has been shown to work better.
- Don’t use OTC cough medicines under 6 years of age. Reason: Cough is a protective reflex.

5 Humidifier:

- If the air is dry, use a humidifier in the bedroom (Reason: dry air makes coughs worse).
- Avoid menthol vapors (Reason: makes coughs worse).

6 Home Isolation Is Needed:

- Isolation means separating sick people with a contagious disease from people who are not sick. (CDC) That means stay at home.
- Isolate the sick patient. Reason: They are contagious and can spread their infection to others.
- Other family members should also stay at home on quarantine. Living with a suspected COVID-19 patient implies close contact has occurred.
- Do Not allow any visitors. (such as friends)
- Do Not go to school or work.
- Do Not go to stores, restaurants, places of worship or other public places.
- Avoid public transportation or ride sharing.
- The patient needs to stay at home but does not need to be confined to a single room. Preventing spread of respiratory infections within a home is nearly impossible. The sick person should try to avoid very close contact with other family members. That includes hugging, kissing, sitting next to or sleeping in the same bed.
- None of this is realistic for young children.
- In addition, many families have limited options. Therefore, triagers should individualize their recommendations for isolation after discussing it with the caller.
7 How to Protect Others - When You or Your Child are Sick:
- Stay home from school or work if you are sick. Your doctor or local health department will tell you when it is safe to return.
- Cough and sneeze into your shirt sleeve or inner elbow. Don't cough into your hand or the air.
- If available, sneeze into a tissue and throw it into trash can.
- Wash hands often with soap and water. After coughing or sneezing are important times.
- Don't share glasses, plates or eating utensils.
- Wear a face mask when around others.
- Always wear a face mask (if available) if you have to leave your home (such as going to a medical facility). Always call first to get approval and careful directions.

8 Call Back If:
- Shortness of breath occurs
- Difficulty breathing occurs
- Your child becomes worse

9 Care Advice given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.

Call PCP when Office is Open

Earache or ear discharge also present

R/O: otitis media

0 Call PCP When Office Is Open: You need to discuss this with your child's doctor (or NP/PA) within the next few days. Call the office when it is open.

1 Alternative Disposition - If NO PCP, Have Other HCP Re-triage the Patient, If Available:
- During this pandemic, the medical community is trying to prevent any unnecessary referrals to medical facilities. Parents want this as well. Reason: Many are very fearful of being exposed to COVID-19 in medical settings.
- Therefore, many EDs and UCCs encourage re-triage of nurse referrals to their site. Re-triage by a physician has been shown to reduce ED referrals.
- Your patient does not have a PCP (primary care provider) or HCP: If available, use another resource.
- In some communities, the ED may provide a telephone triage service for patients who have COVID-19 with worsening symptoms. Or an identified health department official may serve this role.
- Some hospitals or practices may even offer a telemedicine triage service.

2 Fever Treatment:
- For fever above 102 F (39 C), you may use acetaminophen or ibuprofen if the patient is uncomfortable. (See Dosage table).
- For fevers 100-102 F (37.8 to 39 C), fever medicines are not needed. Reason: Fever turns on your body's immune system. Fever helps fight the infection.
- Exception: if the patient also has pain, treat it.
- Fluids: Offer cool fluids in unlimited amounts. Reason: prevent dehydration. Staying well hydrated helps the body sweat and give off heat.
- Note to triager about ibuprofen concerns: Discuss only if caller brings up concerns about ibuprofen. Response: The CDC, WHO, AAP and other experts continue to support the use of ibuprofen (if needed) for patients with COVID-19. They found no scientific evidence to support the claim that ibuprofen made this disease worse.

3 Cold or Hot Pack for Ear Pain:
- Apply a cold pack or a cold wet washcloth to outer ear for 20 minutes to reduce pain while medicine takes effect.
- Note: Some children prefer local heat for 20 minutes.
- Caution: cold or hot pack applied too long could cause frostbite or burn.

4 Coughing Fits or Spells - Warm Mist and Fluids:
- Breathe warm mist (such as with shower running in a closed bathroom).
- Give warm clear fluids to drink. Examples are apple juice and lemonade. Don't use warm fluids before 3 months of age.
- Amount. If 3 - 12 months of age, give 1 ounce (30 ml) each time. Limit to 4 times per day. If over 1 year of age, give as much as needed.
- Reason: Both relax the airway and loosen up any phlegm.
- What to Expect: The coughing fit should stop. But, your child will still have a cough.
5 Homemade Cough Medicine:
- **Age**: 3 Months to 1 year:
  - Give warm clear fluids (e.g., apple juice or lemonade) to thin the mucus and relax the airway. Dosage: 1-3 teaspoons (5-15 ml) four times per day.
  - Note to Triager: Option to be discussed only if caller complains that nothing else helps: Give a small amount of corn syrup. Dosage: 1/4 teaspoon (1 ml). Can give up to 4 times a day when coughing. Caution: Avoid honey until 1 year old (Reason: risk for botulism).
- **Age** 1 year and older: Use **Honey** 1/2 to 1 tsp (2 to 5 ml) as needed as a homemade cough medicine. It can thin the secretions and loosen the cough. (If not available, can use corn syrup.) OTC cough syrups containing honey are also available. They are not more effective than plain honey and cost much more per dose.
- **Age** 6 years and older: Use **Cough Drops** (throat drops) to decrease the tickle in the throat. If not available, can use hard candy. Avoid cough drops before 6 years. Reason: risk of choking.
  - OTC cough medicines are not recommended. (Reason: no proven benefit for children.) Honey has been shown to work better.
  - Don't use OTC cough medicines under 6 years of age. Reason: Cough is a protective reflex.

6 Humidifier:
- If the air is dry, use a humidifier in the bedroom (Reason: dry air makes coughs worse).
- Avoid menthol vapors (Reason: makes coughs worse).

7 Home Isolation Is Needed:
- Isolation means separating sick people with a contagious disease from people who are not sick. (CDC) That means stay at home.
- Isolate the sick patient. Reason: They are contagious and can spread their infection to others.
- Other family members should also stay at home on quarantine. Living with a suspected COVID-19 patient implies close contact has occurred.
- Do Not allow any visitors. (such as friends)
- Do Not go to school or work.
- Do Not go to stores, restaurants, places of worship or other public places.
- Avoid public transportation or ride sharing.
- The patient needs to stay at home but does not need to be confined to a single room. Preventing spread of respiratory infections within a home is nearly impossible. The sick person should try to avoid very close contact with other family members. That includes hugging, kissing, sitting next to or sleeping in the same bed.
  - None of this is realistic for young children.
  - In addition, many families have limited options. Therefore, triagers should individualize their recommendations for isolation after discussing it with the caller.

8 How to Protect Others - When You or Your Child are Sick:
- Stay home from school or work if you are sick. Your doctor or local health department will tell you when it is safe to return.
- Cough and sneeze into your shirt sleeve or inner elbow. Don't cough into your hand or the air.
- If available, sneeze into a tissue and throw it into trash can.
- Wash hands often with soap and water. After coughing or sneezing are important times.
- Don't share glasses, plates or eating utensils.
- Wear a face mask when around others.
- Always wear a face mask (if available) if you have to leave your home (such as going to a medical facility). Always call first to get approval and careful directions.

9 Call Back If:
- Shortness of breath occurs
- Difficulty breathing occurs
- Your child becomes worse

10 Care Advice given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.

R/O: sinusitis

0 Call PCP When Office Is Open: You need to discuss this with your child's doctor (or NP/PA) within the next few days. Call the office when it is open.
1 Alternative Disposition - If NO PCP, Have Other HCP Re-triage the Patient, If Available:

- During this pandemic, the medical community is trying to prevent any unnecessary referrals to medical facilities. Parents want this as well. Reason: Many are very fearful of being exposed to COVID-19 in medical settings.
- Therefore, many EDs and UCCs encourage re-triage of nurse referrals to their site. Re-triage by a physician has been shown to reduce ED referrals.
- Your patient does not have a PCP (primary care provider) or HCP: If available, use another resource.
- In some communities, the ED may provide a telephone triage service for patients who have COVID-19 with worsening symptoms. Or an identified health department official may serve this role.
- Some hospitals or practices may even offer a telemedicine triage service.

2 Fever Treatment:

- For fever above 102 F (39 C), you may use acetaminophen or ibuprofen if the patient is uncomfortable. (See Dosage table).
- For fevers 100-102 F (37.8 to 39 C), fever medicines are not needed. Reason: Fever turns on your body's immune system. Fever helps fight the infection.
- Exception: if the patient also has pain, treat it.
- Fluids: Offer cool fluids in unlimited amounts. Reason: prevent dehydration. Staying well hydrated helps the body sweat and give off heat.
- Note to triager about ibuprofen concerns: Discuss only if caller brings up concerns about ibuprofen. 5 Humidifier:

- If the air is dry, use a humidifier in the bedroom (Reason: dry air makes coughs worse).
- Avoid menthol vapors (Reason: makes coughs worse).

6 Home Isolation Is Needed:

- Isolation means separating sick people with a contagious disease from people who are not sick. (CDC) That means stay at home.
- Isolate the sick patient. Reason: They are contagious and can spread their infection to others.
- Other family members should also stay at home on quarantine. Living with a suspected COVID-19 patient implies close contact has occurred.
- Do Not allow any visitors. (such as friends)
- Do Not go to school or work.
- Do Not go to stores, restaurants, places of worship or other public places.
- Avoid public transportation or ride sharing.
- The patient needs to stay at home but does not need to be confined to a single room. Preventing spread of respiratory infections within a home is nearly impossible. The sick person should try to avoid very close contact with other family members. That includes hugging, kissing, sitting next to or sleeping in the same bed.
- None of this is realistic for young children.
- In addition, many families have limited options. Therefore, triagers should individualize their recommendations for isolation after discussing it with the caller.
7 How to Protect Others - When You or Your Child are Sick:
- Stay home from school or work if you are sick. Your doctor or local health department will tell you when it is safe to return.
- Cough and sneeze into your shirt sleeve or inner elbow. Don’t cough into your hand or the air.
- If available, sneeze into a tissue and throw it into trash can.
- Wash hands often with soap and water. After coughing or sneezing are important times.
- Don’t share glasses, plates or eating utensils.
- Wear a face mask when around others.
- Always wear a face mask (if available) if you have to leave your home (such as going to a medical facility). Always call first to get approval and careful directions.

8 Call Back If:
- Shortness of breath occurs
- Difficulty breathing occurs
- Your child becomes worse

9 Care Advice given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.

Home Care

1 Home Care: You should be able to treat this at home.

2 Reassurance and Education - Probable COVID-19 with Mild Symptoms:
- Your child has been diagnosed as probably having COVID-19 OR
- You suspect COVID-19 because it is widespread in your community and your child has developed symptoms that match (cough and/or fever).
- Your child probably did not receive a lab test for COVID-19. It doesn't matter. Most infections are mild, especially in children.
- The symptoms are mild. They stay that way for over 80% of people.
- Here’s some care advice to help your child and to help prevent others from getting sick.

3 Treatment of Symptoms:
- The treatment is the same whether you have COVID-19, influenza or some other respiratory virus.
- The only difference for COVID-19 is you need to stay on home isolation until you recover. Reason: You want to protect other people from getting it.
- Treat the symptoms that are bothering you the most.
- There is no anti-viral medication for treating COVID-19. As of now, none of the drugs mentioned recently in the news (such as chloroquine) have been shown to improve outcomes in treating this virus. More research is needed in this area.
- Antibiotics are not helpful for viral infections.
- You don’t need to call or see your doctor unless you develop trouble breathing or become worse in any other way.

4 Fever Treatment:
- For fever above 102 F (39 C), you may use acetaminophen or ibuprofen if the patient is uncomfortable. (See Dosage table).
- For fevers 100-102 F (37.8 to 39 C), fever medicines are not needed. Reason: Fever turns on your body’s immune system. Fever helps fight the infection.
- Exception: if the patient also has pain, treat it.
- Fluids: Offer cool fluids in unlimited amounts. Reason: prevent dehydration. Staying well hydrated helps the body sweat and give off heat.
- Note to triager about ibuprofen concerns: Discuss only if caller brings up concerns about ibuprofen. Response: The CDC, WHO, AAP and other experts continue to support the use of ibuprofen (if needed) for patients with COVID-19. They found no scientific evidence to support the claim that ibuprofen made this disease worse.
Homemade Cough Medicine:
- **Age**: 3 Months to 1 year: Give warm clear fluids (e.g., apple juice or lemonade) to thin the mucus and relax the airway. Dosage: 1-3 teaspoons (5-15 ml) four times per day.
- Note to Triager: Option to be discussed only if caller complains that nothing else helps: Give a small amount of corn syrup. Dosage: 1/4 teaspoon (1 ml). Can give up to 4 times a day when coughing. Caution: Avoid honey until 1 year old (Reason: risk for botulism).
- **Age**: 1 year and older: Use Honey 1/2 to 1 tsp (2 to 5 ml) as needed as a homemade cough medicine. It can thin the secretions and loosen the cough. (If not available, can use corn syrup.) OTC cough syrups containing honey are also available. They are not more effective than plain honey and cost much more per dose.
- **Age**: 6 years and older: Use Cough Drops (throat drops) to decrease the tickle in the throat. If not available, can use hard candy. Avoid cough drops before 6 years. Reason: risk of choking.
- OTC cough medicines are not recommended. (Reason: no proven benefit for children.) Honey has been shown to work better.
- Don't use OTC cough medicines under 6 years of age. Reason: Cough is a protective reflex.

Home Isolation Is Needed:
- Isolation means separating sick people with a contagious disease from people who are not sick. (CDC) That means stay at home.
- Isolate the sick patient. Reason: They are contagious and can spread their infection to others.
- Other family members should also stay at home on quarantine. Living with a suspected COVID-19 patient implies close contact has occurred.
- Do Not allow any visitors. (such as friends)
- Do Not go to school or work.
- Do Not go to stores, restaurants, places of worship or other public places.
- Avoid public transportation or ride sharing.
- The patient needs to stay at home but does not need to be confined to a single room. Preventing spread of respiratory infections within a home is nearly impossible. The sick person should try to avoid very close contact with other family members. That includes hugging, kissing, sitting next to or sleeping in the same bed.
- None of this is realistic for young children.
- In addition, many families have limited options. Therefore, triagers should individualize their recommendations for isolation after discussing it with the caller.

Stopping Home Isolation - Must Meet all 3 Requirements (CDC):
- Fever gone for at least 72 hours (3 full days) off fever-reducing medicines AND
- Cough and other symptoms must be improved AND
- Symptoms started more than 7 days ago.
- If unsure it is safe for you to leave isolation, check the CDC website or call your PCP.

How to Protect Others - When You or Your Child are Sick:
- Stay home from school or work if you are sick. Your doctor or local health department will tell you when it is safe to return.
- Cough and sneeze into your shirt sleeve or inner elbow. Don't cough into your hand or the air.
- If available, sneeze into a tissue and throw it into trash can.
- Wash hands often with soap and water. After coughing or sneezing are important times.
- Don't share glasses, plates or eating utensils.
- Wear a face mask when around others.
- Always wear a face mask (if available) if you have to leave your home (such as going to a medical facility). Always call first to get approval and careful directions.

Call Back If:
- Shortness of breath occurs
- Difficulty breathing occurs
- Your child becomes worse

Care Advice given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.

COVID-19 Home Isolation, questions about

**Home Care**: You should be able to treat this at home.
Home Isolation Is Needed:
- Isolation means separating sick people with a contagious disease from people who are not sick. (CDC) That means stay at home.
- Isolate the sick patient. Reason: They are contagious and can spread their infection to others.
- Other family members should also stay at home on quarantine. Living with a suspected COVID-19 patient implies close contact has occurred.
- Do Not allow any visitors. (such as friends)
- Do Not go to school or work.
- Do Not go to stores, restaurants, places of worship or other public places.
- Avoid public transportation or ride sharing.
- The patient needs to stay at home but does not need to be confined to a single room. Preventing spread of respiratory infections within a home is nearly impossible. The sick person should try to avoid very close contact with other family members. That includes hugging, kissing, sitting next to or sleeping in the same bed.
- None of this is realistic for young children.
- In addition, many families have limited options. Therefore, triagers should individualize their recommendations for isolation after discussing it with the caller.

Stopping Home Isolation - Must Meet all 3 Requirements (CDC):
- Fever gone for at least 72 hours (3 full days) off fever-reducing medicines AND

- Symptoms started more than 7 days ago.
- If unsure it is safe for you to leave isolation, check the CDC website or call your PCP.

Call Back If:
- Shortness of breath occurs
- Difficulty breathing occurs
- Your child becomes worse

Care Advice given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.

COVID-19 Prevention, questions about
5 How to Protect Others - When You or Your Child are Sick:
• Stay home from school or work if you are sick. Your doctor or local health department will tell you when it is safe to return.
• Cough and sneeze into your shirt sleeve or inner elbow. Don't cough into your hand or the air.
• If available, sneeze into a tissue and throw it into trash can.
• Wash hands often with soap and water. After coughing or sneezing are important times.
• Don't share glasses, plates or eating utensils.
• Wear a mask when around others.
• Always wear a mask (if available) if you have to leave your home (such as going to a medical facility). Always call first to get approval and careful directions.

6 Call Back If:
• Shortness of breath occurs
• Difficulty breathing occurs
• Your child becomes worse

7 Care Advice given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.

COVID-19 Testing, questions about

1 Home Care: You should be able to treat this at home.

2 COVID-19 Testing - Who Needs It:
• Tests for COVID-19 are only done on people who are sick (have a fever OR cough) AND also have a health history that puts them at definite risk for having COVID-19. That mainly means close contact with someone who has lab confirmed or suspected COVID-19 disease.
• As community spread increases, who needs testing change.
• When cases of COVID-19 are everywhere, testing becomes pointless on mildly ill patients. Testing will mainly be helpful for patients who need admission to the hospital.
• Testing requires a doctor's order (as with all medical tests).
• Testing is performed on fluid collected on a throat swab and/or nasal swab.
• Swab specimens are then sent to a lab.
• The results become available in 24-72 hours.
• Caution: Once there is widespread community transmission, testing is not done on exposed people who don't have serious symptoms.

3 Testing Sites for Specimen Collection:
• Swabs of the throat and/or nose will only be collected on people who have a doctor's order.
• People cannot walk in and request a COVID-19 test.
• Specimen collection sites vary from city to city. Your local health department may operate drive through sites.
• In general, they are not done in medical offices or clinics.
• If you are sent to have a COVID-19 test done, go to the site recommended by your local health department, nurse advice line, or PCP.
• Caution: Don't go to an ER, other health facility or testing site without a doctor's order. If you do, you will not receive a test. And you may be exposed to patients who have COVID-19.

4 Call Back If:
• Shortness of breath occurs
• Difficulty breathing occurs
• Your child becomes worse

5 Care Advice given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.

COVID-19 Maternal Illness and Breastfeeding

1 Home Care: You should be able to treat this at home.

2 Breastfeeding and COVID-19:
• Breastfeeding experts recommend you continue to breastfeed even if you are sick with COVID-19.
• Wash your hands before feeding your baby.
• The CDC recommends to wear a mask if available. Be careful to avoid coughing on your baby.
• Breastmilk gives beneficial antibodies your body is making against this illness to your baby. This should provide some protection against this illness for your baby, like it does for influenza and most other viral illnesses.
• The virus is probably not passed through breastmilk, but this is not yet known for sure.

3 Wash Your Hands with Soap and Water:
• Wash your hands and face frequently with soap and water.
4 Home Isolation Is Needed:
- Isolation means separating sick people with a contagious disease from people who are not sick. (CDC) That means stay at home.
- Isolate the sick patient. Reason: They are contagious and can spread their infection to others.
- Other family members should also stay at home on quarantine. Living with a suspected COVID-19 patient implies close contact has occurred.
- Do Not allow any visitors. (such as friends)
- Do Not go to school or work.
- Do Not go to stores, restaurants, places of worship or other public places.
- Avoid public transportation or ride sharing.
- The patient needs to stay at home but does not need to be confined to a single room. Preventing spread of respiratory infections within a home is nearly impossible. The sick person should try to avoid very close contact with other family members. That includes hugging, kissing, sitting next to or sleeping in the same bed.
- None of this is realistic for young children.
- In addition, many families have limited options. Therefore, triagers should individualize their recommendations for isolation after discussing it with the caller.

5 Stopping Home Isolation - Must Meet all 3 Requirements (CDC):
- Fever gone for at least 72 hours (3 full days) off fever-reducing medicines AND
- Cough and other symptoms must be improved AND
- Symptoms started more than 7 days ago.
- If unsure it is safe for you to leave isolation, check the CDC website or call your PCP.

6 Call Back If:
- Breastfeeding isn't going well
- Your baby becomes sick

7 Care Advice given per Coronavirus (COVID-19) - Diagnosed or Suspected (Pediatric) guideline.

COVID-19, questions about

1 Home Care: You should be able to treat this at home.

2 Trusted Sources for Accurate Information - CDC and AAP:
- Nurse call centers and doctors' offices are overloaded with calls. They need to keep their lines open for sick patients.
- To meet the extreme demand for COVID-19 information, when possible, find your answers online. Here are the most reliable websites:
  - CDC website: https://www.cdc.gov/coronavirus
  - American Academy of Pediatrics parent website: www.healthychildren.org
- Nurse advice lines and medical call centers are needed for sick patient calls.

3 COVID-19 Outbreak:
- An outbreak of this infection began in Wuhan, China in early December 2019.
- The first COVID-19 patient in the United States was reported on January 21, 2020. During March, cases were identified in all states.
- The first COVID-19 patient in Canada was reported on January 31, 2020.
- The World Health Organization (WHO) declared COVID-19 a global pandemic.

4 COVID-19 Symptoms:
- COVID-19 coronavirus causes a respiratory illness. The most common symptoms are fever, cough and shortness of breath.
- Less common symptoms are body aches, chills, diarrhea, headache, runny nose, and sore throat.

5 COVID-19 - CDC Definition of Exposure (Close Contact):
- You are at risk of getting COVID-19 if the following has occurred:
  - Close contact with a person who tested positive for COVID-19 AND contact occurred while they were ill.
  - Living in or travel from a city, country or other geographic area where there is documented community spread of COVID-19. This carries a lower risk compared to close contact if one observes social distancing.
  - Community spread is occurring in most of the US, especially in cities.
- The CDC (https://www.cdc.gov/coronavirus/2019-ncov/travelers) has the most up-to-date list of where COVID-19 outbreaks are occurring.
COVID-19 - How it is Spread:
- COVID-19 is spread from person to person.
- The virus spreads when respiratory droplets produced when a person coughs or sneezes. The infected droplets can then be inhaled by a nearby person or land on the surface of their eyes.
- Most infected people also have respiratory secretions on their hands. These secretions get transferred to healthy people on doorknobs, faucet handles etc. The virus then gets transferred to healthy people when they touch their face or rub their eyes.
- These methods are how most respiratory viruses spread.

COVID-19 - Travel:
- Avoid all non-essential travel.
- If you must travel, go to CDC website for updates on travel advisories: https://www.cdc.gov/coronavirus/2019-ncov/travelers.

Other COVID-19 Facts:
- Incubation Period: average 5 days (range 2 to 14 days) after coming in contact with the secretions of a person who has COVID-19.
- Expected Course of the Infection: 80% have a mild illness, much like normal flu or a bad cold. The symptoms usually last 2 weeks.
- No Symptom Patients: An unknown percentage of infected patients have no symptoms.
- Complications: 20% have a more severe illness with trouble breathing from viral pneumonia. Many of these need to be admitted to the hospital. People with complications generally recover in 3 to 6 weeks.
- Death rate: currently estimated at 0.5 to 2% (CDC) of all infected patients.
- Children generally have a mild illness. There have been no deaths under age 10 and only 1 in teens. Older adults, especially those with chronic lung disease or weak immune systems, have the highest death rates.
- Vaccine: There currently is no vaccine to prevent COVID-19. Many labs are working on developing a vaccine, but that will take at least a year.
- Treatment: Currently, there is no effective anti-viral medication for coronavirus. Treatment is supportive. Oxygen and IV fluids are used for hospitalized patients.
- New drugs: None of the drugs mentioned recently in the news (such as chloroquine) have any proven efficacy in treating or preventing this viral disease. More research is needed in this area.

Wash Your Hands with Soap and Water:
- Wash your hands and face frequently with soap and water.

Call Back If:
- You have other questions

BACKGROUND INFORMATION

COVID-19 Outbreak
- An outbreak of this infection began in Wuhan, China in early December 2019.
- The first COVID-19 patient in the United States was reported on January 21, 2020. During March, cases were identified in all states.
- The first COVID-19 patient in Canada was reported on January 31, 2020.
- The World Health Organization (WHO) has declared COVID-19 a global pandemic.

COVID-19 Symptoms
- COVID-19 coronavirus causes a respiratory illness. The most common symptoms are fever, cough and shortness of breath.
- Less common symptoms are body aches, chills, diarrhea, headache, runny nose, and sore throat.
COVID-19 - Other Facts

- Incubation Period: average 5 days (range 2 to 14 days) after coming in contact with the secretions of a person who has COVID-19.
- Expected Course of the Infection: 80% have a mild illness, much like normal flu or a bad cold. The symptoms usually last 2 weeks.
- No Symptom Patients: An unknown percentage of infected patients have no symptoms.
- Complications: 20% have a more severe illness with trouble breathing from viral pneumonia. Many of these need to be admitted to the hospital. People with complications generally recover in 3 to 6 weeks.
- Death rate: currently estimated at 0.5 to 2% (CDC) of all infected patients.
- Children generally have a mild illness. There have been no deaths under age 10 and only 1 in teens. Older adults, especially those with chronic lung disease or weak immune systems, have the highest death rates.
- Vaccine: There currently is no vaccine to prevent COVID-19. Many labs are working on developing a vaccine, but that will take at least a year.
- Treatment: Currently, there is no effective anti-viral medication for coronavirus. Treatment is supportive. Oxygen and IV fluids are used for hospitalized patients.
- New drugs: None of the drugs mentioned recently in the news (such as chloroquine) have any proven efficacy in treating or preventing this viral disease. More research is needed in this area.

COVID-19 - CDC Definition of Exposure (Close Contact)

- You are at risk of getting COVID-19 if the following has occurred:
- Close contact with a person who tested positive for COVID-19 AND contact occurred while they were ill.
- Living in or travel from a city, country or other geographic area where there is documented community spread of COVID-19. This carries a lower risk compared to close contact if one observes social distancing.
- Community spread is now occurring in most of the US, especially in cities.
- The CDC (https://www.cdc.gov/coronavirus/2019-ncov/travelers) has the most up-to-date list of where COVID-19 outbreaks are occurring.

COVID-19 - How it is Spread

- COVID-19 is spread from person to person.
- The virus spreads when respiratory droplets produced when a person coughs or sneezes. The infected droplets can then be inhaled by a nearby person or land on the surface of their eyes.
- Most infected people also have respiratory secretions on their hands. These secretions get transferred to healthy people on doorknobs, faucet handles etc. The virus then gets transferred to healthy people when they touch their face or rub their eyes.
- These methods are how most respiratory viruses spread.
- Reports from China suggest that the initial coronavirus (COVID-19) cases were spread from animals (probably bats) to humans.

COVID-19 - Travel

- Avoid all non-essential travel.
- If you must travel, go to CDC website for updates on travel advisories: https://www.cdc.gov/coronavirus/2019-ncov/travelers.

Ibuprofen and other NSAID Use for COVID-19
• Many callers have expressed concerns that ibuprofen (or other NSAID) use to treat COVID-19 symptoms may worsen the disease.
• These concerns originated from a few physicians’ comments and have since spread over social media.
• To date, there is no scientific evidence (clinical trials or studies) that show that using ibuprofen negatively impacts outcome in COVID-19 patients. We will continue to review any new literature as it is published.
• The CDC, WHO, AAP and our Infectious Disease expert reviewers continue to approve the use of ibuprofen for COVID-19.
• For this reason, STCC guidelines continue to recommend ibuprofen as an acceptable way to treat high fevers and pain. (Note: Remind callers that fevers are beneficial, help fight the infection, and may speed recovery. Low-grade fevers should not be treated.)
• If callers remain concerned, they can use acetaminophen for symptoms that warrant treatment.
• Caution: For suspected COVID-19 patients on oral steroids, such as prednisone, the triager should involve the PCP for a decision about whether the drug can be continued.

Other Coronaviruses in Humans

• MERS-CoV: Middle East Respiratory Syndrome (MERS)
• SARS-CoV: Severe Acute Respiratory Syndrome (SARS)
• Of note, neither of these viruses had a major impact on the pediatric population.
• Common coronaviruses causing colds and upper respiratory symptoms that are identified in currently available commercial respiratory testing panels are different than COVID-19 addressed in this guideline.

Concerns About Positive Lab Test for the Common Coronavirus that Causes Colds

• There are many strains of coronaviruses. Most of them cause the common cold.
• Older viral respiratory panels only tested for the "common" coronavirus.
• Common coronavirus strains usually don't cause serious illness in healthy children.
